

Assignment feedback: Toby Draper

What you did well:

- Data imported correctly with some wrangling with comments to describe code intent. Good use of reusable User Defined Function, this demonstrates your strong coding skill
- Code executed without errors and a good work in terms of logical structure and application of good practices
- Clear narrative added alongside visualizations and elaborate account of the observed insights.
- Actionable recommendation provided
- Clear presentation of the findings supported by analysis

Areas for growth:

- The analytical approach outlined the action from data preparation to the analysis. It would be helpful to extend it to include the techniques involved, the rationale for the choice of the techniques and any limitations observed.

You demonstrated strong coding skills by importing data correctly, including necessary wrangling and using a reusable User Defined Function. Your code executed flawlessly, reflecting a logical structure and application of good practices. You provided a clear narrative alongside visualizations, elaborating on observed insights and offering actionable recommendations. Your presentation effectively supported the findings with thorough analysis. To make your work even stronger, you should extend your analytical approach to include the specific techniques you used, the rationale for choosing them, and any limitations you observed during the process.
